

Network Protection & Recovery Service

Suitable for the medium sized enterprise, the network protection and recovery service integrates with your existing backup strategy to dramatically reduce recovery times and provide quick ship or online recovery of your network to a local Storage Online Recovery Centre in the event of a disaster.

The network protection and recovery service can be customized to include any number of servers and desktops making it suitable for all budgets.

Features

- Integration with existing backup software
- Proactive monitoring and support
- Regular recovery testing
- Recovery to dissimilar hardware
- Quick ship network, server or desktop replacement
- Online network recovery to virtual infrastructure
- Workplace recovery to virtual desktop infrastructure

Benefits

- Dramatically reduce recovery times
- Recover from data loss, software corruption and viruses within minutes
- Quick recovery from hardware failure with replacement hardware delivered to site and up and running within hours
- Recover network from natural disaster or fire within hours
- Online recovery of network in the event of major disaster
- Ensures business continuity in the event of a disaster

Remote Office Protection & Recovery Service

Suitable for smaller networks or remote offices within the Enterprise, the remote office protection and recovery service provides a fully automated and monitored service with quick ship or online recovery of the remote office in the event of a disaster.

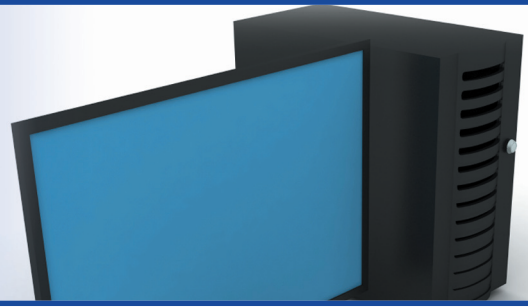

Features

- Fully automated and monitored service
- Regular recovery testing
- Quick ship remote office, server or desktop replacement
- Online remote office recovery to virtual infrastructure
- Workplace recovery to virtual desktop infrastructure

Benefits

- Dramatically reduce recovery times
- Recover from data loss, software corruption and viruses within minutes
- Quick recovery from hardware failure with replacement hardware delivered to site and up and running within hours
- Recover remote office from natural disaster or fire within hours
- Online recovery of remote office in the event of major disaster
- Ensures business continuity in the event of a disaster

Server Protection & Recovery Service

Suitable for the protection of critical servers or as a component of the network and remote office recovery options, the server protection and recovery service provides a fully automated and monitored service with quick ship of a replacement server to site in the event of hardware failure.

Features

- Fully automated and monitored service
- Regular recovery testing
- Quick ship server replacement

Benefits

- Dramatically reduce recovery time for critical servers
- Recover from data loss, software corruption and viruses within minutes
- Recover to a Virtual Machine in minutes
- Quick recovery from hardware failure with replacement hardware delivered to site and up and running within hours

Desktop Protection & Recovery Service

Suitable for the protection of standalone desktops or laptops or as a component of the network and remote office recovery options, the desktop protection and recovery service provides a fully automated and monitored service with quick ship of a replacement desktop/laptop to site in the event of hardware failure.

Features

- Fully automated and monitored service
- Regular recovery testing
- Quick ship desktop replacement

Benefits

- Dramatically reduce recovery time for desktops/laptops
- Recover from data loss, software corruption and viruses within minutes
- Recover to a Virtual Machine in minutes
- Quick recovery from hardware failure with replacement hardware delivered to site and up and running within hours
